Session Description

This special session deals with the problem of integrating artificial intelligence into organizational decision making while preserving human judgment, transparency, ethical accountability, and sustainability. As AI increasingly informs strategic planning, risk assessment, resource allocation, and talent management, organizations face challenges related to trust, bias, explainability, governance, and effective human-machine collaboration. The goal is to bring together researchers and practitioners to present conceptual frameworks, empirical studies, and applied models that explain how human expertise and AI systems can be combined to improve managerial effectiveness and social impact. The session seeks to advance knowledge on collaborative intelligence, responsible AI adoption, leadership capabilities, and governance mechanisms that enable sustainable, high-quality decisions across private and public organizations

The topics of interest include, but are not limited to:

- Collaborative intelligence and hybrid decision systems
- AI copilots for strategic and board-level decisions
- Responsible and explainable AI in management
- Algorithmic governance and regulatory readiness
- Human oversight in autonomous organizational systems
- Generative AI for managerial analytics and forecasting
- ESG-driven decision platforms and sustainability AI
- Digital twins for executive experimentation
- Trust calibration between managers and machines
- AI-enabled crisis and resilience management
